## Improving life outcomes

Welcome to our specialist independent **outpatient oncology centre** offering a nationally recognised service for patients needing access to the **latest diagnostics, medical oncology and radiation oncology** treatments.

We work with local and regional oncologists and surgeons in conjunction with partner hospitals to deliver **rapid access pathways** for all cancers.

## Specialist outpatient oncology centres

Our 14 specialist independent outpatient oncology centres offer a nationally recognised premium service for patients needing access to **the latest medical oncology and radiation oncology treatments**.

We are part of a global organisation promoting a model of care offering new innovation and evidence-based cancer treatments.

**Our oncology outpatient centres** are equipped with **advanced radiotherapy** technologies, together with chemotherapy, nursing, personalised wellbeing care and cancer diagnostics at selected centres. These include **one stop breast** clinics and **rapid access urology**, haematology and head and neck services.

**We treat all adult cancers**, including breast and prostate, as well as less common cancers and palliative patients.

We work closely with leading local and regional oncologists and surgeons to provide complete **rapid access pathways** – with five days from plan to treatment. We also have pathways in place at all of our centres for acute admissions if needed.

We provide an eMDT platform to facilitate easy and secure communication and data access between healthcare teams and experts across the GenesisCare global organisation.

We are recognised by all insurers and self-pay options are available.

**Our mission is to ensure patients achieve the best life outcomes possible following a cancer diagnosis**

When required, we will help your patients with transport depending on treatment and location. Please enquire for more details.

### How to refer

Patients can be referred directly for diagnostics or to one of the surgeons or oncologists listed in this directory. The surgeons consult at private hospitals in your area and have established referral pathways to oncologists who work closely with us.

## The latest cancer treatments and innovative care pathways as standard

### Advanced radiotherapy

We offer innovative and advanced radiotherapy techniques as part of integrated care pathways which support the entire patient journey from diagnosis to survivorship.

#### Volumetric modulated arc therapy (VMAT)

Provided as standard, this modality gives high conformity, reducing toxicity and preserving options for future treatment.

#### Stereotactic ablative radiotherapy (SABR)

Delivers multiple finely targeted beams of high-dose radiation and is revolutionising the treatment of small tumours such as lung, liver, pancreas and bone cancers.

#### Stereotactic radiosurgery (SRS)

Delivers precisely-targeted radiation in fewer high-dose treatments than traditional therapy to preserve healthy tissue.

#### Gamma Knife radiosurgery

Provides maximum precision for the most complex and critically located targets in the brain.

#### MRIdian

Combines precision radiotherapy with cutting-edge magnetic resonance (MR) image guidance to precisely locate tumours and significantly improve radiotherapy targeting accuracy in moving tumours.

#### Surface-guided radiotherapy (SGRT)

For tattoo-free treatment and healthy tissue preservation.

#### Deep inspiration breath hold (DIBH) technique

Using SGRT, this improves patient comfort and reduces damage to the heart, lungs and liver.

### Image-guided radiotherapy (IGRT)

We use 3D cone beam CT verification for precise internal imaging.

#### Rectal spacers

An organ-sparing spacer for prostate cancer patients which significantly reduces rectal toxicity and side effects, improving quality of life.

### Chemotherapy

We provide a full range of systemic anti-cancer therapies in private, individual suites with one-to-one nursing and 24/7 on call triage for acute admissions. Our iQemo prescribing and management platform ensures a high-quality approach to all chemotherapy administrations.

We are introducing genomic profiling to evaluate effectiveness.

### Theranostics

A revolutionary treatment combining imaging technology with radiopharmaceuticals offering a fast and accurate diagnosis with precisely targeted therapy. We offer <sup>177</sup>Lutetium PSMA therapy for metastatic castration-resistant prostate cancer (mCRPC) and will soon offer <sup>177</sup>Lutetium octreotate therapy for neuroendocrine tumours.

**We believe care should be focused on the individual, not just the disease**

## Penny Brohn UK

Our patients have access to a 'whole person' approach to care, made possible through our unique partnership and funding of Penny Brohn UK services within many of our centres.

Penny Brohn UK is a national cancer charity that helps people live well with the impact of cancer, by paying attention to their mind, body, spirit and emotions. Patients are assigned a Penny Brohn wellbeing consultant who will evaluate their cancer-related concerns and design a series of therapies tailored to individual needs. This is provided at no extra cost to patients undergoing chemotherapy or radiotherapy at GenesisCare or their insurers. Personalised wellbeing therapies offered include acupuncture, massage and counselling.

In addition to services within our centres where available, Penny Brohn UK also provides a telephone and online wellbeing support service to all GenesisCare patients. Each patient can partake in telephone consultations so that we can understand what additional help is needed to support their health and wellbeing. There are also weekly timetabled online sources of support that can be accessed.

We are the only independent healthcare provider in the UK to embed a cancer charity within our service and fully fund it for all of our patients.

**We do more than treat the disease**

## Exercise medicine

Our partnership with the world-leading expert, Professor Robert Newton from the Edith Cowan University, enables us to offer an evidence-based approach to exercise medicine. Exercise is effective in reducing the burden of several specific cancers and can demonstrate improvements in treatment tolerance, muscle mass, physical function, self-esteem, QoL and cancer-related fatigue.

Our exercise medicine specialists are trained physiotherapists and work with consultants to create safe and effective exercise programmes that are specific to patient diagnosis and treatment plans. We provide support and resources to promote behaviour change with regard to physical activity, including a free GenesisCare Exercise Medicine app. Many patients who use our app report a huge increase in how they feel about their health.

Exercise medicine is provided at no cost to patients undergoing chemotherapy or radiotherapy at GenesisCare or their insurers.

GenesisCare cancer treatments are covered by private medical insurance and our **fully integrated care pathways** include diagnostic tests, consultant appointments, surgery, chemotherapy, radiotherapy and follow-up care.

Self-pay prices are available upon request – call your local centre

## Using PMI and self-pay is easy with GenesisCare

We recommend that your patient contacts their insurance company at the **point of diagnostic referral** to get the most benefit from their private medical insurance.

At GenesisCare, a cancer diagnosis, personalised treatment plan and private medical insurance approval can take as little as 24 hours.

**Treatment within five days from planning scan**  
**Better care faster**

We can help with  
pre-authorisation

## Diagnostics

### Imaging including:

- Breast ultrasound
- Digital mammograms and tomosynthesis
- Contrasted enhanced mammography
- Stereotactic biopsy
- MRI breast including MR-guided breast biopsy
- PET/CT

### Core needle biopsy

### Fine-needle aspiration

### Routine and specialised blood tests

### Genetic testing

## Treatments

### Advanced radiotherapy as standard, including:

- Volumetric modulated arc therapy (VMAT)
- Image-guided radiotherapy (IGRT)
- Tattoo-free surface-guided radiotherapy (SGRT)
- Organ-at-risk sparing deep inspiration breath hold (DIBH)
- Stereotactic ablative radiotherapy (SABR)

### Chemotherapy

- Full range of systemic anti-cancer therapies
- Private, individual chemotherapy suites
- One-to-one nursing and 24/7 on-call triage
- iQemo prescribing and management platform
- Genomic profiling

### Wellbeing

- Penny Brohn UK wellbeing programme
- Exercise medicine

## Our Breast Service of the Future combines best practice and latest technologies

### Rapid access pathways

|              |                       |
|--------------|-----------------------|
| Diagnostics  | - from 24 hours       |
| Chemotherapy | - from five days      |
| Radiotherapy |                       |
| Urgent       | - same day            |
| Palliative   | - two days from plan  |
| Radical      | - five days from plan |

Our **rapid access breast pathways** are comprehensive covering all modalities and including an acute admission pathway.

**Treatment within five days from planning scan**

## Diagnostic

<sup>68</sup>Gallium is paired with a special carrier molecule that specifically targets cancer cells to create a highly sensitive radiotracer. This enables us to highlight cancer sites, including metastases, using PET/CT imaging.

## Therapy

If the PET/CT scan shows specific uptake of the carrier molecule by the target cancer cells, treatment can commence within two weeks. The radioisotope <sup>177</sup>Lutetium is paired with a carrier molecule to create a radiopharmaceutical that can seek out and destroy the cancer cells. The carrier molecule transports <sup>177</sup>Lutetium to the target cells where it can deliver a targeted dose of radiation, while minimising damage to healthy tissues.

We plan to extend to other diseases including stomach and pancreatic cancer.

## Personalised seek and destroy treatment for hard-to-treat cancers using PET/CT imaging and radionuclides

**Available at Windsor and Oxford**

For advanced prostate cancer and neuroendocrine tumours

Referrals accepted from the UK, US, UAE and Europe

We offer <sup>177</sup>Lutetium PSMA therapy for metastatic castration-resistant prostate cancer at our Windsor centre and <sup>177</sup>Lutetium octreotate therapy for neuroendocrine tumours will soon be available at Oxford and Windsor.

When required, we will help your patients with transport depending on treatment and location. Please enquire for more details.

## Precise radiotherapy

SABR uses high-quality CT imaging to deliver multiple beams of radiation in an accurate and conformable dose. This enables sufficient dose intensity to ensure ablation of tumour cells over a small number of fractions, with minimal toxicity to healthy tissue.

SABR is also called stereotactic body radiotherapy (SBRT). SABR treatment to the brain is called stereotactic radiosurgery (SRS) – see our separate section on neuro-oncology.

SABR is now used for many cancers, such as lung and liver, replacing surgery in many instances. We are a SABR specialist and this will be offered at all GenesisCare centres for simple cases. Complex cases, including spine, re-irradiation, liver, pancreas and central lung, are treated at our SABR specialist centres. Every case is reviewed by our SABR advisory team.

\*From August 2021

## Stereotactic ablative radiotherapy (SABR) has revolutionised the treatment of small tumour sites

### Complex SABR at

Birmingham  
Bristol  
Cambridge  
Guildford\*  
London  
Nottingham  
Oxford

When required, we will help your patients with transport depending on treatment and location. Please enquire for more details.

## A new paradigm in radiation oncology

We are the first to introduce MRIdian to the UK. MRIdian combines precision radiotherapy with cutting-edge magnetic resonance (MR) image guidance to precisely locate tumours and significantly improve radiotherapy targeting accuracy. MR imaging allows clinicians to detect subtle anatomical changes between treatments and rapidly reshape dose delivery – all while the patient is in the treatment position.

## Benefits of MRIdian

This advanced technology means tumour sites can receive a high dose while sparing more normal tissue. This means reduced side effects of radiotherapy and shorter treatment courses.

## The UK's first MRIdian – combining MRI soft tissue visualisation with precision radiotherapy

**Available to all GenesisCare patients at our centres in London and Oxford**

Real-time planning and adaptation significantly improves targeting accuracy

Reduces side effects and improves outcomes

For prostate, lung, liver, pancreatic and GI cancers

When required, we will help your patients with transport depending on treatment and location. Please enquire for more details.

**Treatment within one week from planning  
Better care faster**

## Complete care pathway

**Stereotactic radiosurgery (SRS)** – non-surgical radiotherapy that delivers precisely-targeted radiation in fewer high-dose treatments than traditional therapy to preserve healthy tissue.

**Gamma Knife radiosurgery** – provides maximum precision for the most complex and critically located targets in the brain.

**3T MRI** – powerful MRI modality to enable early detection and close monitoring of brain metastases.

**Functional MRI (fMRI)** – to locate eloquent brain tissue to guide neurosurgical planning.

**Mixed reality viewers** – to visualise tumour and treatment options in 3D.

**Diffusion tensor imaging** – provides assessment of tissue microstructure and we use tractography to provide a 3D visualisation of neural tracts and the brain's connectivity. This provides additional information about the location of important pathways for speech, movement, vision and other behaviours important for patient quality of life.

## Precise, brain area-sparing radiation for small brain tumours and functional abnormalities of the brain

Available to all **GenesisCare patients at our centres in London and Oxford**

A world-class end-to-end service  
Specialist eMDT to assess each case and recommend treatment

When required, we will help your patients with transport depending on treatment and location. Please enquire for more details.

**Appointments within 48 hours of referral**

**Treatment within five days from planning scan  
Better care faster**
